[†] All JetFUEL metrics are class-stratified for the indicated jet class. FPND values are from the validated sweep; FPD/W1M/W1P/Cov./MMD use the completed stratified replay repair. MPGAN FPD values are from the iGAPT JetNet-30 comparison; PC-JeDi did not report FPD. The no-guidance rows use $w = 0$; selected rows use $w_g = 0$, $w_q = 0.25$, and $w_t = 0.5$.
